

In this Phoenix Software update:

- ▶ **REMINDER: free webinar about Multi Project Wafer runs and Process Design Kits**
- ▶ **JePPIX training course on photonic integration on InP (27 Oct. - 7 Nov. 2014)**
- ▶ **ePIXfab Multi Project Wafer run training for silicon photonics (24 - 28 Nov. 2014)**
- ▶ **Phoenix Software annual training (Feb. 2015)**

▲ **REMINDER: free webinar about Multi Project Wafer runs and Process Design Kits**

Tomorrow, September 16th, Lightwave will host a webinar about how Multi Project Wafer runs and Process Design Kits will enable low barrier entry to advanced photonic integrated circuits. Phoenix Software will talk about the importance of design kits and software tools. The webinar is free, but requires [registration](#).

Manufacturing Automation

▲ **JePPIX training course on photonic integration on InP (27 Oct. - 7 Nov. 2014)**

The JePPIX training course in InP-based Photonic Integrated Circuit design and fabrication will run again in Eindhoven (the Netherlands) this year. This course is supported by the commercial software partners Phoenix Software, Photon Design and Filarete. This is an ideal opportunity to not only study PIC design with experts, get hands-on experience with various software tools, but also to study practical fab aspects and, ultimately, to get some of your designs built through Multi Project Wafer runs at Oclaro, SMART Photonics or FhG/HHI.

Foundry Design Kits

▲ **ePIXfab Multi Project Wafer run training for silicon photonics (24 - 28 Nov. 2014)**

The dates are known! This year's autumn edition of the well known ePIXfab training will deal in-depth with the offered Multi Project Wafer run processes and technologies in silicon photonics. Experts from Phoenix Software will provide hands on experience in the photonics design flow, from simulation to mask layout output for IMEC, IHP, CEA-Leti and VTT. For more details about the programme and registration, please send an e-mail to info@epixfab.eu.

Design Solutions

▲ **Phoenix Software annual training (Feb. 2015)**

Our in-depth annual training is scheduled for next year February. As we had more requests for participation than we could handle last time, we would like you to express your interest by sending an e-mail to training@phoenixbv.com, in order to help us deciding whether we need to create two groups. Thanks in advance for your understanding and support.

Phoenix Software supports organizations worldwide to improve quality, reduce time to market and enhance research by offering unique and highly integrated software solutions, training and customer support. Customers are ranging from Fortune 500 companies to start-ups, universities and research institutes, active in integrated photonics, microfluidics, MEMS, printed electronics and other micro and nano technologies. Furthermore Phoenix Software is supporting Multi Project Wafer runs at various foundries with dedicated PDKs for TriPleX, InP and silicon photonics.
