▲ **Phoenix Software February training**

The annual Phoenix Software Integrated Photonics Design Training will be held from 16 – 20 February, 2015 at Phoenix Software's headquarters (Enschede, the Netherlands). The training shows our commitment to support photonics designers to achieve first time right designs in an efficient manner. This course is targeting both experienced designers that want to further develop their skills as well as engineers starting in the field of integrated photonics.

- Get introduced to integrated photonics design and manufacturing
- Learn the use of photonic integrated circuit simulation tools
- Obtain in-depth knowledge of integrated design from mask layout to optical simulations
- Develop the skills to create your own process design kit or libraries
- See how Phoenix Software is collaborating with other software vendors
- Exchange experiences and ideas with other participants

We invite our customers and other interested designers to get in touch with [training@phoenixbv.com](mailto:training@phoenixbv.com) to reserve a seat!

For all details, please check [www.phoenixbv.com/training](http://www.phoenixbv.com/training)

▲ **Phoenix Software is exhibiting at Photonics West 2015**

We will be exhibiting at SPIE Photonics West in the Moscone center in San Francisco (USA) from 10 - 12 February. Do you want to learn more about our design tools and how these are used by designers all around the world? Make an appointment or pass by at the Holland pavillion (booth #5001) to talk about your needs.

Further we will be participating in [two workshops](#) in the demonstration area, showing how PDKs for IMEC, SMART Photonics and LioniX are used to successfully develop new solutions.

**Design Solutions**

▲ **Think global, act local: China offices opened**

Phoenix Software has opened a marketing and sales office in China. We believe that a local contact point is important to support the growing marketplace for integrated photonics in China. Contact details to be found at our [website](#).

---

Phoenix Software supports organizations worldwide to improve quality, reduce time to market and enhance research by offering unique and highly integrated software solutions, training and customer support. Customers are ranging from Fortune 500 companies to start-ups, universities and research institutes, active in integrated photonics, microfluidics, MEMS, printed electronics and other micro and nano technologies. Furthermore Phoenix Software is supporting Multi Project Wafer runs at various foundries with dedicated PDKs for TriPleX, InP and silicon photonics.
